Workflow application solutions

A collaborative workflow solutions using Microsoft Exchange™ 2000.

Utilizing Microsoft Office and Internet browser technology, Mitrasoft Workflow Solution combines document collaboration, workflow, data and forms management, and flexible programming capabilities into tightly integrated solution. As a result, users in the global workplace can work together more productively, and businesses can manage document-intensive workflow more securely, efficiently, and cost-effectively.

Corporate Intranet Solutions:

The Breakthrough Corporate Intranet Solutions using Microsoft SharePoint Portal Server.

Information is definitely one of your most valuable corporate assets, but what you need is a knowledge management solution that enables you to:

- Create, store and manage documents more efficiently
- Publish information faster and easier
- Organize information in a more understandable way so it's easier to find what you need
- Coordinate and collaborate among users to get the work done right

Project Management Solutions :

Managing Projects across the Enterprise using Microsoft® Project, Microsoft Project Central.

Microsoft Project has long been committed to providing tools that support collaborative planning. Today, Microsoft Project Central continues this leadership by delivering a powerful set of collaborative planning and scheduling tools.

Upgrading to Exchange 2000 Solutions :

Preparation Assesment for Exchange 2000.

Exchange 2000 will bring you rock solid messaging and collaboration, the Web Storage System (Web Store) collaboration and applications, and any time, anywhere access and communication.

Business Intelligence Solutions :

An Effective Decision Support using Microsoft SQL Server 2000.

Business Intelligence solutions' analytical capabilities enable companies to remain agile and quick to respond to customer actions and input. No longer do chief marketing officers need to wait until months after a campaign is over to measure the effectiveness of messaging, product mix, and pricing. Again, the rich data provided by the web clickstream speeds up real-time customer interaction and enterprise-wide decision making.

Server-based Computing Solutions :

Heterogeneous computing environment, Windows-based applications available to everyone, support all types of hardware, operating platforms, network connections and LAN protocols, Enterprise-scale management, Seamless desktop integration

eReporting Solutions (Report Writer)

With hundreds and thousands of mission-critical reports serving all facets of organization, every eBusiness needs an efficient report management and delivery system to ensure the **availability and timeliness of the information** people need to make decisions.

Security Solutions

Provide consultancy and implementation to help your IT to set and lock down policies that keep your System up-to-date, properly configured and protected-enterprise-wide.

e-Security for two-factor authentication solutions

Ensures greater network security than the traditional static password that is easily guessed or compromised. Positively identifies users by combining something they know (secret PIN) and something they have (pseudorandom token code that changes every 60 seconds).

Firewall Solutions

Businesses of every size face many challenges when securing their network communications. Check Point meets these challenges with Internet security solutions that Connect, Protect, Manage and Accelerate network communications.

Storage Management Solutions

Storage Management Solution, protects your most critical business asset data before it goes missing. Downtime result in increased expenses, lost revenue, and lost customers.
