

Enterprise Portal

Enterprise Portal in Microsoft Dynamics AX 2009

BENEFITS

- **Build powerful connections with employees, customers, vendors, and other business partners.** Simplify communication and collaboration by making critical information and reporting and analytical tools easy to access and share through a customized, Web-based portal.
- **Make your business available online to all users.** People working at remote sites or on the road can use their Web portals to enter hours, project data, sales quotations, and orders to keep business information up to date, regardless of time zones or geographical barriers.
- **Provide employees with self-service options.** Employees can enter expense reports, make purchase requisition requests, view FAQs, register absence information, and update key human resource (HR) data at their convenience.
- **Improve user productivity.** Enterprise Portal is familiar, easy to use, and interactive, minimizing training requirements. In addition, rapid deployment helps reduce IT maintenance and administration costs.

Open your business to employees, customers, vendors, and other business partners around the clock. Enterprise Portal in Microsoft Dynamics® AX makes it easy to provide RoleTailored data and business processes in real time over the Web, with full support for intranet, business-to-consumer, and business-to-business communications.

Based on Microsoft® Windows® SharePoint® Services, Enterprise Portal enables you to drive down costs by decreasing paperwork and empowering people to access information, processes, and tools. For example, customers can view company and product information, reducing the need for customer service people to respond to common questions and demands. Vendors can work efficiently with your business by initiating transactions electronically and communicating in their language of choice.

Role Center for the Sales Representative

With the Web-based Enterprise Portal, people can access the relevant tasks, information, and tools they need through the RoleTailored user interface. Employees can personalize their Role Centers according to business needs, such as viewing key performance indicators (KPIs) or changing language and currency settings. Web developers can easily customize the Web parts in Role Centers or in Enterprise Portal to add additional functionality using state-of-the-art development tools and technologies, such as Microsoft ASP.NET, Asynchronous JavaScript and XML (AJAX), and Microsoft Visual Studio®.

FEATURES

BUSINESS ESSENTIALS	RoleTailored access	<ul style="list-style-type: none"> • Deploy Role Centers for RoleTailored access to specialized data, alerts, and common tasks. • Personalize Role Centers by applying out-of-the-box Web parts, reports, or key performance indicators (KPIs). • Use built-in tools to customize the Web portal to meet specific business needs.
